

## SYLLABUS SOFTWARE ENGINEERING

### 1. Information on academic programme

1.1. University	„1 Decembrie 1918”
1.2. Faculty	Facultatea de Informatică și Inginerie
1.3. Department	Informatică și Inginerie
1.4. Field of Study	Computer Science
1.5. Cycle of Study	undergraduate
1.6. Academic programme / Qualification	Computer Science

### 2. Information of Course Matter

2.1. Course	SOFTWARE ENGINEERING		2.2. Code	CSE303			
2.3. Course Leader	Lect. dr. Domsa Ovidiu						
2.4. Seminar Tutor	Lect. dr. Domsa Ovidiu						
2.5. Academic Year	III	2.6. Semester	I	2.7. Type of Evaluation (E – final exam/ CE - colloquy examination / CA -continuous assessment)	E	2.8. Type of course (C– Compulsory, Op – optional, F - Facultative)	O

### 3. Course Structure (Weekly number of hours)

3.1. Weekly number of hours	4	3.2. course	2	3.3. seminar, laboratory	2
3.4. Total number of hours in the curriculum	56	3.5. course	28	3.6. seminar, laboratory	28
Allocation of time:					
Individual study of readers					36
Documentation (library)					38
Home assignments, Essays, Portfolios, projects					36
Tutorials					38
Assessment (examinations)					4
Other activities.....					

3.7 Total number of hours for individual study	162
3.9 Total number of hours per semester	218
3.10 Number of ECTS	4

### 4. Prerequisites (where applicable)

4.1. curriculum-based	INFO209, INFO207
4.2. competence-based	Room equipped with video projector / board Laboratory – computer, Project Management applications.

### 5. Requisites (where applicable)

5.1. course-related	Room equipped with video projector / boar
5.2. seminar/laboratory-based	Laboratory – computer, Software: Microsoft Project.

## 6. Specific competences to be acquired (chosen by the course leader from the programme general competences grid)

Professional competences	C2.2 The identification and explanation of appropriate mechanisms for software analysis, design and development. C3.4. UML Data and model's description. C3.5. The development of software engineering components for business projects.
Transversal competences	C6.2. The identification and explanation of base architectures, structures, organizing and management systems for software development stages. C6.3. The use of various techniques for installing, configuring and managing different software tools

## 7. Course objectives (as per the program specific competences grid)

7.1 General objectives of the course	Abilities to develop and manage all stack for problems solving regarding information's structuring, storing, processing, and documentation and date description.
7.2 Specific objectives of the course	Explain basic concepts in the field of software engineering and process stages software development to describe and compare models of software development processes Analyze user requirements, identify solutions, compare and select tools appropriate software to resolve a given issue. Use proper UML core charts (UC, activity, classes, sequences, states) in system analysis and design software. To argue the importance of the field software engineering and ethical principles of the engineering profession software. Develop a correct relationship with clients.

## 8. Course contents

8.1 Course (learning units)	Teaching methods	Remarks
1. Introduction to software engineering 1.1 Development of software systems 1.2 Software engineering features 1.3 Notes on the development of a software product	<i>Lecture, conversation, exemplification</i>	
2. The life cycle of a software product 2.1 Phases of the life cycle 2.2 Cascade models 2.3 Iterative models 2.4 Extreme Programming Methodology	<i>Lecture, conversation, exemplification</i>	
3. Requirements engineering 3.1 Specific issues 3.2 Types of requirements 3.3 Requirements analysis 3.4 Specification of requirements	<i>Lecture, conversation, exemplification</i>	
4. Software modeling 4.1 Modeling languages 4.2 Structured modeling 4.3 Object Oriented Modeling 4.4 UML Language	<i>Lecture, conversation, exemplification</i>	<b>On-line, Teams</b>

5. Designing software systems 5.1 Software architectures 5.2 Characteristics of a software system 5.3 Architectural Styles 5.4 Architectural models	<i>Lecture, conversation, exemplification</i>	<b>On-line, Teams</b>
6. Development of software systems 6.1 RAD 6.2 Incremental development 6.3 Prototyping 6.4 Agile methods 6.5 Development cycle in extreme programming 6.6 Reuse in the development of a software system	<i>Lecture, conversation, exemplification</i>	<b>On-line, Teams</b>
7. Testing and validation 7.1 Verification and Validation Process 7.2 Static and dynamic verification 7.3 Testing and debugging 7.4 Planning the test 7.5 Static analysis 7.6 Testing and validating systems	<i>Lecture, conversation, exemplification</i>	<b>On-line, Teams</b>
<b>Case study</b>	<i>Lecture, conversation, exemplification</i>	
<b>Seminars-laboratories</b>		
	<b>Teaching methods</b>	
Microsoft project and different tools, general presentation, description of the functionalities, examples	<i>Project-work, computer-based activities, laboratory activities</i>	
Applications frame and project design using project management tools	<i>Project-work, computer-based activities, laboratory activities</i>	
UML description using software tools, Use proper UML core charts (UC, activity, classes, sequences, states)	<i>Project-work, computer-based activities, laboratory activities</i>	
Designing tools. Designing objects – based content.	<i>Project-work, computer-based activities, laboratory activities</i>	<b>On-line, Teams</b>
Designing software systems, Software architectures, Arhitectural Style, Architectural models	<i>Project-work, computer-based activities, laboratory activities</i>	<b>On-line, Teams</b>
Agile methods, tool for monitoring and planning tasks.(Jira, Mantis, Scrum monitoring)	<i>Project-work, computer-based activities, laboratory activities</i>	<b>On-line, Teams</b>
Testing and validation tools	<i>Project-work, computer-based activities, laboratory activities</i>	<b>On-line, Teams</b>
Complet case study. Project.	<i>Project-work, computer-based activities, laboratory activities</i>

**9. Corroboration of course contents with the expectations of the epistemic community's significant representatives, professional associations and employers in the field of the academic programme**

*Not applicable*

**10. Assessment**

Activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Percentage of final grade
10.4 Course	<i>Final evaluation</i>	<i>Project</i>	60%
	-	-	-
10.5 Seminar/laboratory	<i>Continuous assessment</i>	<i>Laboratory activities portfolio</i>	40%
	-	-	-
10.6 Minimum performance standard:			
Implementation and documentation of the software units in a web applications including object oriented programming language and efficiently using the related concepts.
